WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Saw a 21 mm slice off 20 mm brass bar; face both ends to 20 mm long.
The two end faces must be flat and parallel: face them in one setting each, or lap them on fine paper on glass.
Mass about 53 g; weigh it and write the figure down.
Break the edges 0.3 mm; degrease with alcohol before bonding.
Fit: bonded with a thin film of rigid epoxy on the brass face of the piezo disc, centred, which is bonded to the puck base.
Nothing else touches it: 4.5 mm side gap to the bore and 4.5 mm up to the preamplifier board. No potting below the board.
Check: 20 mm long, faces parallel within 0.05 mm.

LeakListen seismic mass: making sketch
