WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut 232 mm off 63 x 3 mm PVC pressure pipe with a fine saw in a mitre box; square the ends by sanding on a flat board.
Chamfer the inside of both ends 1 mm x 30 degrees so the O-rings slide in without cutting. Deburr inside and out.
Six 4.5 mm screw holes, 4 mm from each end: three at each end, 120 degrees apart. Mark them with a paper wrap round the tube.
Drill the holes with the plug fitted, so the plug can be drilled 3.3 mm and tapped M4 through the same holes (see the plugs).
Fit: plug spigots slide in until the flanges sit on the tube ends; both O-rings on each plug are inside, beyond the screws.
Check: the ends are square; no scratches along the bore in the 25 mm at each end where the O-rings seal.
